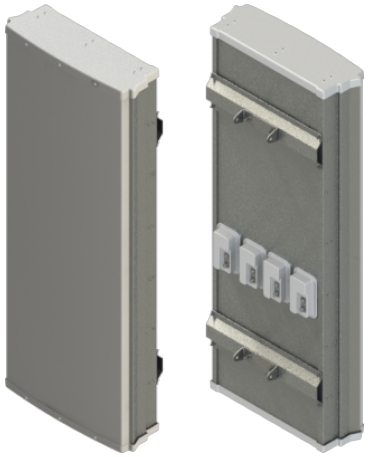
Multi-band Bi-Sector™ Array

BSA-M65-19R010-02



- Six foot (1.8 m), eight port, dual beam antenna with patented asymmetrical beam shapes optimized for LTE
- Two low band and two high band 33° beams to match existing 65° patterns, covering 698-894 MHz and 1710-2170 MHz
- One pair of +45° and −45° cross-polarized ports for each beam
- Slim and low weight single panel design supporting two beams in a single antenna
- Field replaceable, integrated AISG 2.0 compliant Remote Electrical Tilt(RET) system with independent tilt control for each beam
- Dramatic increase in site capacity through higher order sectorization which offsets the need to build new sites
- Boosts data throughput by minimizing interference and optimizing coverage
- Sharp elevation beamwidth aides in network planning
- Optimal elevation sidelobe performance
- Exceeds minimum PIM performance requirements

Overview

The CCI multi-band Bi-Sector™ array is a dual beam antenna with full 700 MHz, SMR 800, Cellular, AWS and PCS band coverage. With two pairs of wideband ports covering 1710-2170 MHz and and two pairs of low band ports covering 698-894 MHz, this six foot (1.8 m) CCI Bi-Sector™ provides the capability to deploy two wideband beams (sectors) and two low band beams (sectors) in a single antenna. This Remote Electrical Tilt (RET) antenna allows separate tilt control for each beam individually, enabling maximum flexibility in network deployment.

CCI's unique patented bi-sector technology provides optimized overlap between the pairs of asymmetric beams, lowers soft handover losses in LTE, UMTS/HSPA+ and CDMA/EVDO systems, while minimizing interference between sectors. Fast roll-off of each of the outer beams and high front-to-back ratios ensure reduced interference. This patented approach enhances data transfer rates within LTE, UMTS and EVDO network sectors and addresses “hotspots” in mobile wireless operator networks.

The single panel design of the Bi-Sector™ Array offers the opportunity to reduce antenna count and directly replaces an existing 65° antenna without mount changes and avoids costly leasing and zoning changes. The enhanced coverage matches the existing sector footprint and minimizes the need for optimization and adjacent site changes, providing operators with significant CAPEX and OPEX cost savings.

CCI antennas are designed and produced to ISO 9001 certification standards for reliability and quality in our state-of-the-art manufacturing facilities.

Applications

- Delivers increased capacity and data-throughput for sites that are performance or capacity constrained
- Provides a higher level of spectrum reuse making it an ideal solution for spectrum limited markets
- Increase capacity without the need for new site builds or carrier adds and without using valuable spectrum resources
